polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, consists and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease roome the printed specification but was obtained in electronic form the printed specification but was obtained in electronic formet directly from USPTO tarks.

                                                             The invention relates to a composition of polynuclectide probes comprising first polynuclectide probes comprising at least a portion of a gene encoding a receptor-like polypeptide, second polynuclectide probes comprising at least a portion of a gene encoding a transducing comprising at least a portion of a gene encoding at least a portion of a gene encoding an effector-like polypeptide. The probes of the composition are useful as array elements in a microarray for monitoring the expression of target polynuclectides. The microarray for monitoring the expression of target polynuclectides. The microarray is useful in the diagnosis and treatment of cancer, an immunopathology or a neuropathology. It can also be used for drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. Microarrays can also be used for monitoring the progression of diseases that may be associated with the altered expression of signalling pathway polypeptides. The composition can also be used to purify a subpopulation of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix, an immunopathology, e.g. ALDS, diababees, pancreatitis, osteoporosis or ulcerative colitis, or a neuropathology, e.g. dementia, amnesia, cepilepsy, Alzheimer's disease or depression. This sequence represents a chuman polynuclectide probe of the invention. Note: The sequence data for contine contains a near a directly from uspro at

                                                                                                                  This cDNA sequence comprises the coding region for human kappa opioid receptor (KOR, see AAW30297), a G protein-coupled receptor implicated in receptor (KOR, see AAW30297), a G protein-coupled receptor implicated in neurotransmissian. A novel method for selectively activating a target cell (TC) comprises: (1) introducing into the cell a nucleic acid sequence (I) that expresses a G protein-coupled receptor (A) modified to be activated superiorly by a synthetic ligand (RASSL); and (ii) exposing the transfected cell to small synthetic molecules (B) that bind to and activate (A), inducting the G protein coupled cellular response associated with receptor activation. (A) has: (a) decreased binding affinity for selected natural ligand of the native receptor; (b) binding affinity for (B); and (c) is activated by binding (B) sulficiently to produce the required cellular response. Also new are: (1) transgenic cells including cransfected with (I); (3) isolated (I); and (4) transgenic non-human animals expressing (A). Activation of (A) results, in vitro or in vivo, controlleration, or secretion of a cellular product, animals expressing (A). Activation of (A) results, in vitro or in vivo, particularly a heterologous therapeutic protein encoded by a second inserted nucleic acid sequence. Particularly it is used to expand the contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to develop cardiac migration and contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to develop cardiac carrythmia, symptoms of bone disease, selzures, vascular contractions, dementia, neurodegeneration etc., for use as models of these diseases (claimed). The transgenic animals are also used for production of altered fat/lean ratios) or to control fertility or induce labour. A calterived from KOR, designated RASSL ORI (see AAW30299), was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

                                                                                                                                                                                                                                                      This sequence codes for the human kappa opioid receptor and was obtained from two overlapping cDNA fragments isolated from a human placental cDNA library. The fragments were amplified from the library using PCR primers based on the sequence of human genomic clones which hybridised with a murine delta receptor cDNA probe. Nucleotide probes derived from the kappa opioid receptor coding sequence are useful for diagnosis of neurological, cardio- vascular and psychiatric disorders associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATGAATTCCTGGCCTTTTGGGGATGTGCTGTGCAAGATAGTAATTTCCATTGATTACTAC 420

| Sequence 1417, Application US/09016434
| Patent No. 6500336
| GENERAL INFORMATION:
| APPLICANT: Janice Au-Young
| APPLICANT: Jeffrey J. Seilhamer
| TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
| TITLE OF INVENTION: PATHWAY GENE EXPRESSION
| NUMBER OF SEQUENCES: 1490
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
| STREET: 3174 PORTER DRIVE
| CITY: PALO ALTO
| STRATE: CALLFORNIA
| COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 1144.4; DB 4; Length 1182; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
